

Task Management Application

Planning, scheduling and tracking task activities are challenging tasks for organisations in the healthcare and hospitality sector. Various tasks such as cleaning, linen changing, supplies replenishment, sanitisation etc. need to be done periodically as well as on demand. These services need to be delivered on time without delays. Delay in assignment of tasks will lead to accumulation of tasks and high wait time. An automated scheduler to manage job assignments can bring in high efficiency, transparency and work load balancing.

Enhance operational transparency

Improve resource utilization

Process Improvement

Overcome workflow distractions

Reduce time to service

Our Solution

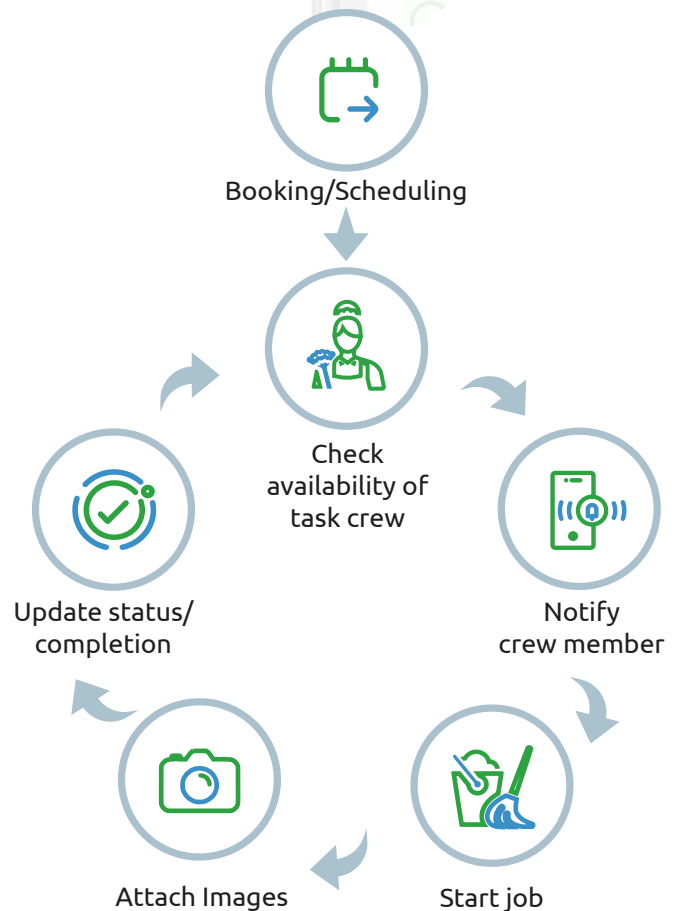

SeeMyPorters Task management module helps to schedule, digitize and automate housekeeping tasks and crew management.

- Dashboards provide a bird's-eye view into operations, process bottlenecks and performance indexes.
- Turnaround time for each activity in the process is monitored and deviations are notified in real time.
- The application automatically assigns task crew based on location if opted or with highest idle time and displays near real-time status of jobs.
- Mobile app for the task crew provides notifications and updates on jobs, attach images and manage breaks.

Business value

- Kick start with zero/minimal upfront investment
- Immediate ROI

SeeMyMachines has its footprint in India, Middle East, and South America.
